# **GLASS FIBER TUBE**

# **Product Description:**

Glass fiber tube is a high-performance tube manufactured using high-quality, very precise techniques using 100% glass fiber epoxy prepreg. It is easy to apply, it is much more durable by weight compared to steel, aluminum and titanium tube.

## **Application Areas:**

- Special types of kites
- R/C models
- Machine parts
- Model and hobby
- UAV
- Electrical and electronics industry
- It is preferred in small or large-scale projects where lightness and strength are important, such as robotic applications.

### Features and Advantages:

- Lightweight
- High mechanical strength
- Not affected by moisture and water
- Easy cutting, practical application
- Thermal Insulation
- Zero thermal expansion
- Calibrated
- They are special type pipes made of glass fiber epoxy prepregten with precision surface treatment.

### **Technical Specifications:**

| Product                                | Glass Fiber Tube Prepr | Glass Fiber Tube Prepreg |  |
|--|------------------------|--------------------------|--|
| Structural                             |                        |                          |  |
| Fiber type                             | Glass Fiber Prepreg    |                          |  |
| Type of Resin                          | Epoxy                  |                          |  |
| Fiber Content by Weight                | >76                    | %                        |  |
| Fiber Content by Volume                | >65                    | %                        |  |
| Strength (Fiber Direction)             | >2080                  | Mpa                      |  |
| Compression Strength (Fiber Direction) | >1450                  | Mpa                      |  |
| Tensile Modulus (Fiber Direction)      | >145                   | Gpa                      |  |
| Density                                | >2,01                  | g/cm3                    |  |
